DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-37, 61-73, drawn to a method of minimizing ventricular undersensing, classified in class 128, subclass 898.
- II. Claims 38-60, drawn a cardiac stimulation device, classified in class 607, subclass 5.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process of using does not require the specifics of applicant's circuits including those means described in the specification under 112.6th paragraph.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
